- Secure Data Backup Facility

Special Features

- Integration with Legacy CRMs
- Integration with 3rd party Accounting Tools
- Adaptable to Multiple Languages
- Adaptable to Multiple Time-Zones
- 30 Days FREE Trial

Key modules of Zed-Service™ that are scaled to serve the repair and service business processes

Work Order Creation

Comprehensive Work Order module allows you to create, dispatch, print and track work orders. You also get to capture information, repair history data and backlog reports.

Spare Part Inventory

Helps to synchronize asset management, maintain minimum stock level with all service centers so they are able to offer repair services to all and every, and reduce repair downtime.

Warranty Management

Lets you manage work orders for In-warranty and Out-of-warranty calls for claim processing, and accuracy of claim settlement. This helps to keep invalid warranty claims by service centers at bay, and increase accuracy of claim settlement. Warranty Claim Management System (WCMS) is also available as stand-alone module.

Forward & Reverse Logistics

These modules help track the complete movement of fresh stocks of product/spare-parts from warehouse to the service centers against indent/PO and defective product/spare-parts back from service centers to the warehouse simultaneously.

Claim Management

This helps in validating & approving claims based on the standard policies enforced by the principle and allows service centers to raise invoices against approved claims for services rendered or parts exchanged.

KPI & Report Dashboard

Offers real-time reporting with drill-down views using multiple parameters including Work-in-Progress, Escalated Products, Repair TAT Analysis, Pending for Parts Details, Work-Order Closure, Ready for Delivery Report, Intimation Report and many more. All reports can be exported, saved and printed in Excel format for future reference.

Dead on Arrival

Handles DOA cases from customers, dealers, distributors, etc. and allows generating DOA Certificate. The certificate bearer can claim the Good units from the specified Sales Channel.

Cannibalization and Teardown

Handles cannibalization & tear down at the highest repair level for products that are defined as DOA (Dead On Arrival) OR BER (Beyond Economical Repair). System allows this as per the pre-defined approval matrix for product tear-down and enables to mark them as “Good” or “Defective”, and stocks the re-usable inventory.
